## PROTECTIVE OILING

### Timber Decks Should be Pre-Oiled Prior to Installation

With a combination of harsh weather conditions & the cost & time to produce outdoor decking, it is extremely important to provide your timber with weather resistance, durability & strength.

To slow down the degrading action of weather & minimise moisture intake it is recommended that outdoor timber is treated with specific oils prior to installation.

At 5 Star Timbers, we understand that this can be a tiresome, time consuming & costly process, so with the assistance of Dulux & FeastWatson, we have developed a pre-installation oiling system to specifically benefit outdoor timber in Queensland's tough climate.

This process will provide protection during installation, enhance the longevity of your timber, reduce mould & fungus attack & is definitely a cost effective option worth considering when you next order decking from 5 Star Timbers.

## NAIL FREE DECKING

### Concealed Fixed Decking in 3 Simple Steps

**STEP 1:** Apply a liberal bead of exterior adhesive to the top of each joist.

**STEP 2:** Place a DeckMate Clip into the groove on 5 Star Timbers decking boards, at the intersection of each joist.

**STEP 3:** Insert the next row of boards onto the DeckMate clip, using a DeckMaster Clamp to hold the board in position. As the deck boards fall short of the next joist, use a DeckBone joiner to join the board between the joists. Do not land the butt joint on the joist.

Snap the DeckBone into two T shaped pieces & insert first DeckBone into position. Place the following board onto the DeckBone, insert the next DeckBone into position to complete the butt joint. Repeat steps 2 & 3, then fix the final row the same as the first.
